Summit X450e Series

Summit® X450e—The industry's first PoE edge switches with the revolutionary modular operating system, ExtremeXOS®.

Voice-Class Availability

- Modular ExtremeXOS operating system
- Ethernet Automatic Protection Switching (EAPS) resiliency protocol
- SummitStack™—highly available, high-speed stacking support

Designed for Converged Network Applications

- High bandwidth, non-blocking architecture for demanding edge applications
- Exceptional Quality of Service (QoS) with advanced traffic management capabilities for converged applications
- Convergence-ready connectivity with Voice-over-IP (VoIP) automatic provisioning
- Efficient management to handle convergence-driven network changes with Power over Gigabit Ethernet

Comprehensive Security

- User policy and host integrity enforcement and Identity Management
- Universal Port dynamic security profile to provide fine granular security policy in the network
- Detection and response to network intrusion

Summit X450e series switches are based on the revolutionary ExtremeXOS core-class operating system from Extreme Networks®. ExtremeXOS highly resilient, modular operating system provides continuous uptime, manageability and operational efficiency.

Summit X450e provides high availability and performance with its advanced traffic management capabilities to support a large-scale rollout of a converged network that supports devices such as IP telephones, wireless APs and other devices that require power from a LAN connection. With low-latency line-rate performance, Summit X450e supports the 802.3af standards-based Power over Ethernet (PoE) on every port.

Summit X450e supports hardware-based routing for both IPv4 and IPv6 which helps provide investment protection by allowing the rollout of IPv6 in your network now or in the future.

The highly flexible Summit X450e switch provides high-density Gigabit Ethernet ports plus dedicated 40 Gbps high-speed stacking ports and optional 10 Gigabit Ethernet ports in a compact 1RU format, supporting a full range of Layer 2 to Layer 4 functionalities on every port for high productivity. Optional redundant power supplies are offered with each switch to protect against power anomalies, providing a continuous operational network.

Target Applications

- Edge PoE switch providing high-density Gigabit PoE to the desktop in a network running ExtremeXOS from edge to core

Summit X450e switch is an industry-leading converged Gigabit Ethernet PoE edge switch with the ExtremeXOS modular operating system and optional dual 10 Gigabit Ethernet ports.

Voice-Class Availability

Powered by the ExtremeXOS modular operating system, the Summit X450e switch supports process recovery and application upgrades without the need for a system reboot. Summit X450e provides the high network availability required for converged applications.

Modular Operating System for Non-Stop Operation

True Preemptive Multitasking and Protected Memory

Summit X450e switches allow each of the many applications—such as Open Shortest Path First (OSPF) and Spanning Tree Protocol (STP)—to run as separate Operating System (OS) processes that are protected from each other. This drives increased system integrity and inherently protects against Denial of Service (DoS) attacks.

Process Monitoring and Restart

The ExtremeXOS modular OS dramatically increases network availability using process monitoring and restart. Each independent OS process is monitored in real time. If a process becomes unresponsive or stops running, it can be automatically restarted.

Loadable Software Modules

The modular design of ExtremeXOS allows the upgrading of individual software modules, should this be necessary, leading to higher availability in the network (see Figure 1).

High Availability Network Protocols

Ethernet Automatic Protection Switching (EAPS)

EAPS allows the IP network to provide the level of resiliency and uptime that users expect from their traditional voice network. EAPS is superior to Spanning Tree or Rapid Spanning Tree protocols and offers sub-second (less than 50 milliseconds) recovery that delivers consistent failover regardless of the number of VLANs, network nodes or network topology. Since EAPS allows the network to recover almost transparently, VoIP calls do not drop and digital video feeds do not freeze or pixelize in most situations.

Spanning Tree/Rapid Spanning Tree Protocols

Summit X450e switches support Spanning Tree (802.1D), Per VLAN Spanning Tree (PVST+), Rapid Spanning Tree (802.1w) and Multiple Instances of Spanning Tree (802.1s) protocols for Layer 2 resiliency.

Software-Enhanced Availability

Software-enhanced availability allows users to remain connected to the network even if part of the network infrastructure is down. Summit X450e switches continuously check for problems in the uplink connections using advanced Layer 3 protocols such as OSPF, VRRP and ESRP (ESRP supported in Layer 2 or Layer 3), and dynamically routes traffic around the problem.

Equal Cost Multipath Routing

Equal Cost Multipath (ECMP) routing allows uplinks to be load balanced for performance and cost savings while also supporting redundant failover. If an uplink fails, traffic is automatically routed to the remaining uplinks and connectivity is maintained.

Link Aggregation (802.3ad)

Link aggregation allows trunking of up to eight links on a single logical connection, for up to 20 gigabits per second (Gbps) of redundant bandwidth per logical connection.

Voice-Grade Stacking with SummitStack

Summit X450e offers dual stacking interfaces to provide high-speed 40 Gbps stacking bandwidth. SummitStack stacking architecture is designed to support converged services such as VoIP and video by its highly available, rapid failover capability with n-1 master redundancy, distributed Layer 2 and Layer 3 switching, link aggregation across the stack and distributed uplinks. SummitStack supports up to eight units in a stack and the mixture of the units can be Summit X250e, Summit X450e, Summit X450a, Summit X480, and Summit X650 switches. It provides sub-second failover for path failure and hitless master/backup failover along with hitless protocol support such as OSPF graceful restart, PoE configuration and Network Login user authentication.

Summit X450e provides chassis-like management and availability with its SummitStack stacking technology (see Figure 2).

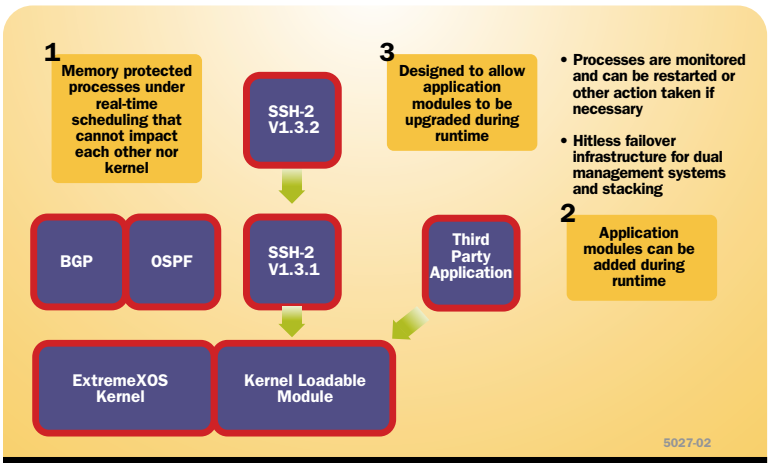

Figure 1: ExtremeXOS Modular Design

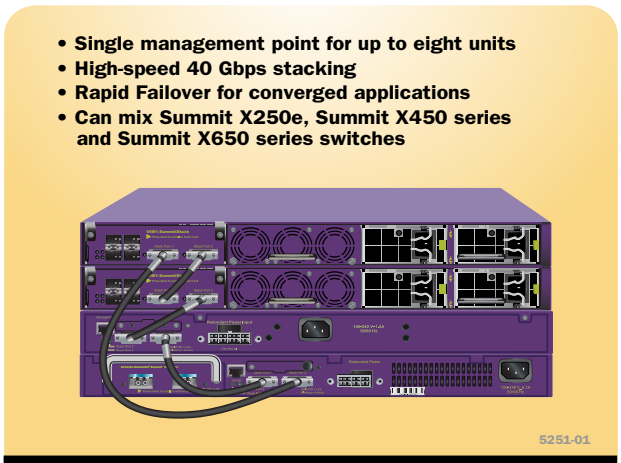

Figure 2: SummitStack Stacking Architecture

Designed for Converged Network Applications

Summit X450e provides a high bandwidth, non-blocking architecture with tri-speed copper Gigabit Ethernet ports with PoE for demanding edge applications.

High Density Gigabit Ports with Optional 10 Gigabit Uplinks

The Summit X450e series provides ideal performance and functionalities for access switches. They eliminate the need to funnel traffic through a low bandwidth gigabit trunk by providing non-blocking 10 gigabit links to the core. As an option module, Summit X450e provides a variety of choices for 10 Gigabit Ethernet uplinks, dual port 10GBASE-T for UTP connectivity, dual port SFP+ for fiber and passive copper connectivity, dual port XFP and dual port XENPAK.

Exceptional Policy-based QoS

Summit X450e switches provide eight hardware queues per port to support granular traffic classification with bandwidth allocation. 1024 centralized classifiers per 24 ports can use information from Layers 1 through 4 to prioritize and meter incoming packets at line-rate. When metering traffic, the switches can drop out-of-spec traffic or flag it for later action. To expedite upstream traffic handling, a packet's classification can be carried forward with Layer 2 (802.1p) and Layer 3 (DiffServ) markings. Summit X450e switches provide advanced traffic management features that support the highest-quality triple play of voice, video and data services.

Efficient Management to Handle Convergence-Driven Network Changes

Universal Port—Voice-over-IP Auto-Provisioning

Summit X450e switches set the stage for convergence applications by allowing enterprises to add new access devices in a plug-and-play fashion. Voice and wireless services can be easily implemented without major network upgrades. Summit X450e supports automatic provisioning of VoIP using LLDP and event-based command scripting capability. It allows dynamic configuration of voice VLANs and QoS. This auto-configuration capability allows you to configure VoIP phone settings such as voice VLAN settings, call server IP address configuration, etc. This level of simplicity in managing network changes can greatly reduce operating expenses.

Power Over Gigabit Ethernet

Deployments of IP Telephony depend on reliable, consistent power from the Ethernet jack. Summit X450e is the basis for a reliable LAN telephony infrastructure with fully redundant 15.4 watts per port, and QoS and resiliency to match the failover requirements for latency-sensitive services like VoIP phones. With Summit X450e, deployment of powered LAN devices is quick and easy with its support of the IEEE 802.3af standard and full Class 3 power availability on all ports, backed up 100% by the optional EPS-500 redundant power supply (Summit X450e-24p). Summit X450e-48p can provide up to 370W of PoE power and can be increased up to 740W of PoE power to support full 15.4W Class 3 devices on all 48 ports by adding the External Power System (EPS-C and EPS-600LS).

Voice Grade Connections

Summit X450e supports a range of QoS technologies that can prioritize and predictably handle high-priority traffic policing or rate limiting on ingress, 802.1q tagging and DiffServ marking, and shaping on egress with eight queues per port. The Extreme Networks tradition of building products with low latency and jitter continues with Summit X450e.

Universal Connectivity

Summit X450e switches offer universal connectivity with high-performance gigabit to the desktop, PoE and wireless support from every RJ-45 port. Installing universal services ports everywhere for data and device power greatly simplifies installations and moves, and helps to future-proof your edge network. Summit X450e provides universal attachment at any desktop Ethernet speed, and any power level from none to full 15.4 Watts.

Comprehensive Network Management

Summit X450e switches support comprehensive network management through Command Line Interface (CLI), SNMP v1, v2c, v3, and an embedded XML-based Web User Interface, ExtremeXOS ScreenPlay™. With a variety of management options and consistency across other Extreme Networks modular and stackable switches, Summit X450e series switches provide ease of management for demanding converged applications.

Extreme Networks has developed tools that help save you time and resources in managing your network. EPICenter® management suite provides fault, configuration, accounting, performance and security functions, allowing more effective management of Extreme Networks multi-layer switching equipment in a converged network.

Advanced Routing Capabilities for the Edge

Summit X450e switches support advanced protocols for an efficient and productive network. Summit X450e switches provide static and RIP routing for simple IPv4 and IPv6 Layer 3 deployment. An optional ExtremeXOS Advanced Edge license extends the feature set to include other important edge functions such as:

- Edge OSPF for much greater extensibility than RIP can provide
- Edge PIM sparse modes for routing of multicast streams
- Policy-based routing
- sFlow® hardware sampling

Comprehensive Security

Implementing a secure network means providing protection at the network perimeter as well as the core. Working together with the Sentriant® family of products from Extreme Networks, Summit X450e uses advanced security functions in protecting your network from known or potential threats. Extreme Networks security offerings encompass three key areas: user and host integrity, threat detection and response, and hardened network infrastructure. Furthermore, with policy-based routing, measures can be taken to provide confidentiality of selective data in transit between internal network nodes.

User Authentication and Host Integrity Checking

Network Login and Dynamic Security Profile

Network Login capability implemented in ExtremeXOS enforces user admission and usage policies. Summit X450e series switches support a comprehensive range of Network Login options by providing an 802.1x agent-based approach, a Web-based (agent-less) login capability for guests, and a MAC-based authentication model for devices. With these modes of Network Login, only authorized users and devices can connect to the network and be assigned to the appropriate VLAN. The Universal Port scripting framework available in Summit X450e lets you implement Dynamic Security Profiles, which in sync with Network Login allows you to implement fine-grained and robust security policies. Upon authentication, the switch can load dynamic ACL/QoS for a user or group of users, to deny/allow the access to the application servers or segments within the network.

Multiple Supplicant Support

Shared ports represent a potential vulnerability in a network. Multiple supplicant capability on a switch allows it to uniquely authenticate and apply the appropriate policies and VLANs for each user or device on a shared port.

Multiple supplicant support secures IP Telephony and wireless access. Converged network designs often involve the use of shared ports.

Media Access Control (MAC)

MAC lockdown secures printers, wireless APs and servers. The MAC address security/lockdown feature allows Summit X450e to block access to any Ethernet port when the MAC address of a station attempting to access the port is different from the configured MAC address. This feature is used to "lock down" any device to a specific port.

Host Integrity Checking

Host integrity checking helps keep infected or non-compliant machines off the network. Summit X450e series switches support a host integrity or endpoint integrity solution that is based on the model from the Trusted Computing Group. Summit X450e interfaces with Sentriant AG200 endpoint security appliance from Extreme Networks to verify that each endpoint meets the security policies that have been set and quarantines those that are not in compliance.

Identity Management

Identity Management allows customers to track users who access their network. User identity is captured based on NetLogin authentication, LLDP discovery and Kerberos snooping. ExtremeXOS uses the information to then report on the MAC, VLAN, computer hostname, and port location of the user.

Network Intrusion Detection and Response

Hardware-based sFlow Sampling

sFlow is a sampling technology that provides the ability to continuously monitor application-level traffic flows on all interfaces simultaneously. The sFlow agent is a software process that runs on Summit X450e and packages data into sFlow datagrams that are sent over the network to an sFlow collector. The collector gives an up-to-the-minute view of traffic across the entire network, providing the ability to troubleshoot network problems, control congestion and detect network security threats.

Port Mirroring

To allow threat detection and prevention, Summit X450e switches support many-to-one and one-to-many port mirroring. This allows the mirroring of traffic to an external network appliance such as an intrusion detection device for trend analysis or for utilization by a network administrator for diagnostic purposes. Port mirroring can also be enabled across switches in a stack.

Line-Rate ACLs

ACLs are one of the most powerful components used in controlling network resource utilization as well as protecting the network. Summit X450e switches support 1,024 centralized ACLs per 24-port block based on Layer 2, 3 or 4-header information such as the MAC or IP source/destination address.

Denial of Service Protection

Summit X450e switches effectively handle DoS attacks. If the switch detects an unusually large number of packets in the CPU input queue, it will assemble ACLs that automatically stop these packets from reaching the CPU. After a period of time, these ACLs are removed, and reinstalled if the attack continues. ASIC-based LPM routing eliminates the need for control plane software to learn new flows, allowing more network resilience against DoS attacks.

Secure Management

To prevent management data from being intercepted or altered by unauthorized access, Summit X450e switches support SSH2, SCP and SNMPv3 protocols. The MD5 hash algorithm used in authentication prevents attackers from tampering with valid data during routing sessions.

Target Applications

Edge PoE Switch for High-Bandwidth Applications

The Summit X450e switch is deployed as a PoE edge switch, extending the benefits of the ExtremeXOS operating system to the network edge. This uniformity provides consistent quality and performance throughout your converged network while eliminating operational inefficiencies. With line-rate performance and low latency, the Summit X450e edge switch connects wireless devices, LAN telephony, PDAs and other equipment without compromising security, scalability, availability, mobility or management.

- 128 load sharing trunks, up to 8 members per trunk
- 8 QoS queues/port
- 4,094 VLANs (Port, Protocol, IEEE 802.1Q)
- 1,024 centralized ACL rules per 24-ports

Forwarding Tables
- Layer 2/MAC Addresses: 8K
- IPv4 LPM Entries: 512
- IPv6 LPM Entries: 256

Rate Limiting
- Ingress bandwidth policing/rate limiting per flow
- Egress bandwidth rate shaping per egress queue and per port
- Rate Limiting Granularity: 64Kbps
- Available Rate Limiters: 1,024 per 24-ports

Indicators
- Per port status LED including power status
- System Status LEDs: management, fan and power

Ports
- 48 ports 10/100/1000BASE-T PoE with auto-speed and auto-polarity
- 4 ports SFP (shared PHY with 4 10/100/1000BASE-T ports)
- 1 port Serial (control port)
- 1 10/100BASE-T out-of-band management port

Option Slot
- Slot for XGM2 dual 10 gigabit option module

External Power Supply Support
- EPS-C with EPS-600LS

Physical Specifications

Dimensions
Height: 1.73 Inches/4.4 Cm
Width: 17.35 Inches/44.1 Cm
Depth: 17.0 Inches/43.2 Cm
Weight: 16.25 lbs/7.4 Kg

Operating Specifications

Temperature
- Operating Temperature Range: 0° C to 40° C (32° F to 104° F)
- Operating Humidity: 10% to 93% relative humidity, non-condensing
- Operational Shock (Half Sine): 30 m/s2 (3g), 11ms, 60 Shocks
- Operational Random Vibration: 3-500 MHz @ 1.5g rms

Storage & Transportation Conditions (Packaged)
- Transportation Temperature: -40° C to 70° C (- 40° F to 158° F)
- Storage and Transportation Humidity: 10% to 95% RH, non-condensing
- Packaged Shock (Half Sine): 180 m/s2 (18g), 6ms, 600 shocks
- Packaged Sine Vibration: 5 – 62 Hz @ Velocity 5mm/s, 62 – 500 Hz @ 0.2 G
- Packaged Random Vibration: 5 – 20 Hz @ 1.0 ASD w/-3dB/oct. from 20 – 200 Hz
- 14 drops min on sides & corners @ 42" (<15kg box)

Power & Acoustic Sound
- Voltage Input Range: 90 – 264V
- Nominal Input Ratings: 100~240V, 50/60 Hz, 6.0A
- Nominal Input Current: 5.25A @ 100V~ (lowline) 2.5A @ 230V~ (highline)
- Maximum In-Rush Current: 30A @115V/6.0 Hz, Max Load
- Efficiency: 80% with 60% – 100% load
- Line Frequency Range: 47 – 63 Hz
- Nominal Frequency Range: 50 – 60 Hz
- Power Supply Input Socket: IEC 320 C14
- Power Cord Input Plug: IEC 320 C13
- Heat Dissipation (with PoE full load): 180W (614 BTU/hr)
- Power Consumption (with PoE full load): 507W (1,730 BTU/hr)
- Heat Dissipation (without PoE): 73W (250 BTU/hr)
- Power Consumption (without PoE): 73W (250BTU/hr)
- Sound Power in accordance with EN 300 753 (10-1997)
- Sound Power: 62 dBA per ISO 7779
- Declared Sound Power: 6.4 belsA per ISO 7779 & ISO 9296
- Bystander Sound Pressure in accordance with NEBS GR-63 Issue 2
- Bystander Sound Pressure: 54 dBA right side @ .6m

Summit X450e Series Redundant PSUs

EPS-500

EPS-500 is the redundant AC Power Supply for higher power consuming AC PSU-based switches including Power-over-Ethernet enabled switches. EPS-500 is one rack unit height and works in standalone. EPS-500 can be rack mounted in a regular 19 inch rack system. EPS-500 comes with a DC output cable to connect between the Summit switch and EPS-500.

EPS-600LS and EPS-C

EPS-600LS is a power module that works with the EPS-C External Power System Chassis. EPS-C has three slots for EPS-600LS and one DC output to connect to high-density PoE Summit switches. Depending upon the number of EPS-600LS installed in EPS-C, it can provide 1) Redundant configuration for up to 370 watts of PoE power with one EPS-600LS installed; 2) Non-Redundant configuration for up to 740 watts of PoE power with two EPS-600LS installed; and 3) Redundant configuration for up to 740 watts of PoE power with three EPS-600LS installed. EPS-C comes with a DC output cable to connect between the Summit switch and EPS-C with EPS-600LS installed.
